

Lubliniec, the 11th of May 2011

with reference to

**European Parliament and Council Regulation
1907/2006/CE**

Concerning the registration, evaluation, authorization and restriction of chemicals (REACH)

- The Z.P.M. “Kaplast” company specializes in production of metal details using technologies of cold working.
- Our company do not produce any substances on their own in quantities totaling over 1 tonne per year.
- None of the chemical substances, used by our company, are intended to be released under normal or reasonably foreseeable conditions of use.
- We only convert materials acquired from our suppliers, who are obliged to register the substances used in their products or services.
- We have launched a survey of all suppliers to verify their position with respect to the REACH regulation. In the nearest time we are expecting to receive from them all the declarations about pre-registrations of substances they use according to REACH requirements.

We are ready to cooperate with the suppliers and customers in order to convey the customers sufficient information on substances in articles we produce.

Yours faithfully,

Product manager

Ing. Michalina Kasprzyk.
